

Reliance Tool Brings New Ceramic Machining Technology to Market

Reliance Tool & Mfg. Co., an Elgin, IL manufacturing company is offering to assist users of carbide parts in evaluating the potential to switch to ceramics.

Paul Knowlton, Company President, said the company has recently found that in certain applications, ceramic parts outlast carbide parts 2 to 1, and through manufacturing efficiencies developed in conjunction with Northern Illinois University, in many cases ceramic parts can now be cost competitive with carbide parts.

Mr. Knowlton suggests interested companies contact the Director of the Ceramics Program, Richard Roberts for more information and a free evaluation. Contact: rroberts@reliancetool.com.
